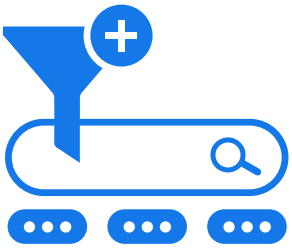
Powerful Threat Automation with Soltra®

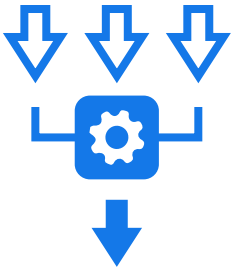
Defend your organization at the speed of threats.

Effective use of cyber threat intelligence is crucial to defending organizations against cyber threats, but it can be difficult to manage the constant flow of data. How do you identify intelligence that's relevant to your organization? Is it possible to adopt a more proactive posture using cyber threat intelligence?

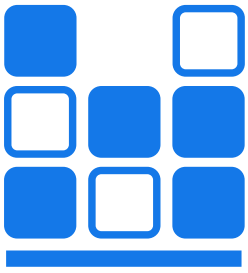
Soltra®, **powered by Celerium®**, is a platform for sharing and automating cyber threat intelligence (CTI) within your organization and the outside world. The platform creates a central repository for all your threat intelligence from both internal and external sources, and normalizes your data in STIX format, ensuring easy interoperability with other security devices you may be using.



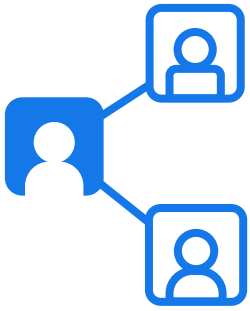
Powerful search, filter, and tag options make it easy to research, prioritize, and send the right data to the right tool



Reduce your attack surface by using Soltra as your single point of contact for receiving and sharing data



Support for all eight STIX constructs allows you to deepen your understanding of intelligence beyond just indicators and observables



Share data with outside organizations such as ISACs/ISAOs, industry associations, communities, government agencies, and others

Ready to streamline your cyber threat intelligence? Contact us today to see Soltra in action!
